Documented Microbotryum mating-type organization and mapping status

Gene-order schematic only; no MPbarcode50 chromosome coordinates or boundaries are asserted.

published regime labels, not physical scale

recombining edge regions
published; categorical control

young species-specific extension
published age class; position not recovered

young species-specific strata
published; exact order not recovered

older shared stratum
predates superbum–shykoffianum split

ancient shared strata
published ancestral strata

Validated in this repository

260/260 tree records parsed

260/260 provisional contig-ID matches

0 chromosome-scale positions

0 recovered orthogroup-to-tree links

Published structural context

PR chromosome fused with part of ancestral HD

small PARs at chromosome edges

M. lagerheimii used as ancestral-order proxy
