
House-mouse t-complex: independent recombination-suppression evidence and quartet support
A. Four t-complex inversions (sequence-validated mm10 intervals)
Published inversion

junction-region uncertainty reported by source
B. Direct suppression measurements are marker-pair / region-wide
Reported map distance (cM)
No CI or window-level map recovered
+/+ conventional map: 7–12 cM
historical T–tf pair: approximate modern mm10 anchors
tf/Hbpr3
Region-wide summary: four inversions ≈20 cM;
reported suppression ≈100–200-fold (not a coordinate-resolved rate)
+/t heterozygotes: 0.1–0.5 cM
C. Frozen ALL_TIPS quartet support; raw 5-kb windows and 250-kb means
Quartet fraction
q_species
q_t_alt
q_other
D. Quartet contrast: D(w) = q_t-alt(w) − q_species(w)
D(w)
Quartet association with the coarse literature estimates is not tested
chr17 position (Mb)
