Stage 13 Phlag cross-system benchmark

Original Phlag v0.2.0; invalid executions are reported as status, not zero accuracy

Phlag execution status

Atlantic cod	degenerate numeric
Fire ants	incompatible input
Anopheles	incompatible input
House mouse	incompatible input

No invalid run is scored as a biological negative.

Benchmark interpretation

Bundled example: finite, informative state path

Cod: SNAPP MCC input, posterior values nonfinite

Other systems: individual/haplotype tips differ

from available collapsed species/population trees

Phlag accuracy: not estimable here

A valid cross-system comparison requires taxon-compatible gene-tree/species-tree inputs or a separately validated mapping.
