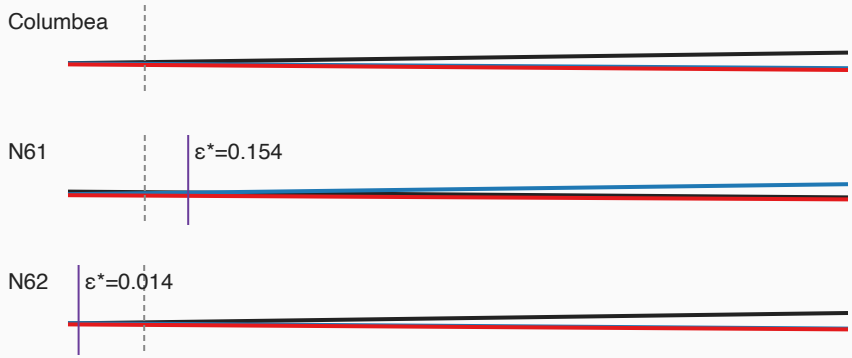
A Genomic architecture

Orange: published GalGal4 PNAS intervals

Structural breakpoint/region coordinates remain a separate track.

B Published QQS mixture



Black/blue/red: q1/q2/q3; dashed: observed valid-locus weight
Full-source QQS; not a 48-taxon gene-tree estimate.

C Completed 48-taxon ASTRAL

Baseline: T0, structural primary

Alternative: PNAS, 500-kb blocks, non-chr4

Between-group unrooted RF = 6

These are discrete deletion treatments, not a continuous epsilon axis.

D Future empirical ASTRAL transition

Pending Bridges-2 mixture grid

No intermediate species-tree results or significance values are plotted.
