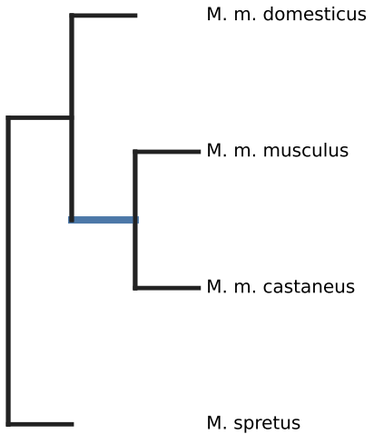
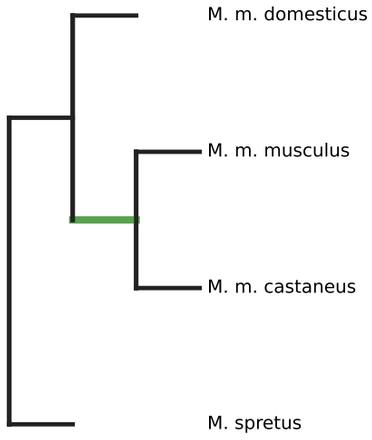
House-mouse t-complex: three haplotype treatments, local quartet distortion, and resampling

**A. Standard-only Q_SPECIES**



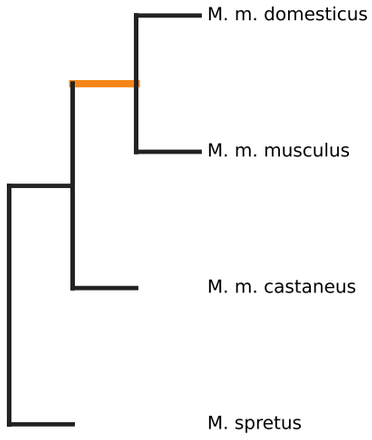
CU = 0.056283; localPP = 0.999985

**t-haplotype-only Q_SPECIES**



CU = 0.202004; localPP = 1.000000

**Mixed (standard + t) Q_T_ALT**

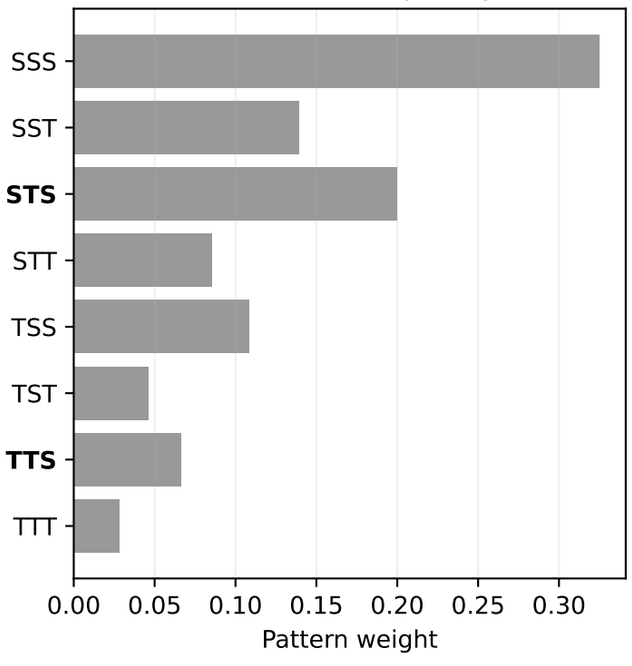


CU = 0.049097; localPP = 1.000000

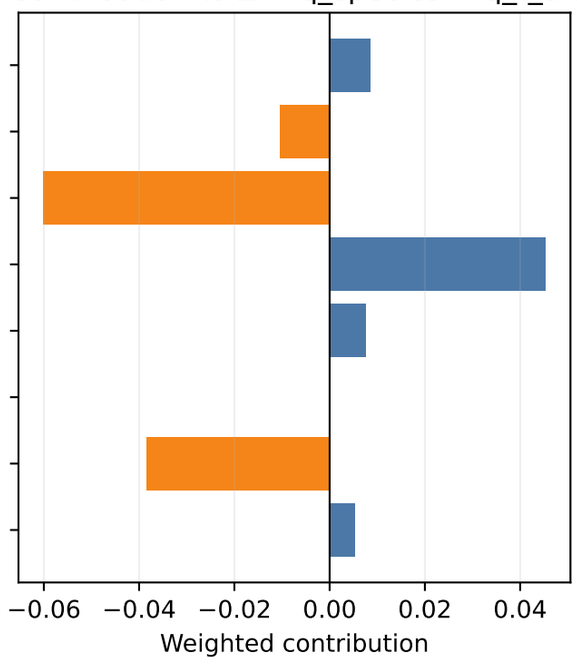
B. Exact arrangement-state quartet composition

**Mixed-state quartets = 64.6%**

C. Pattern frequency

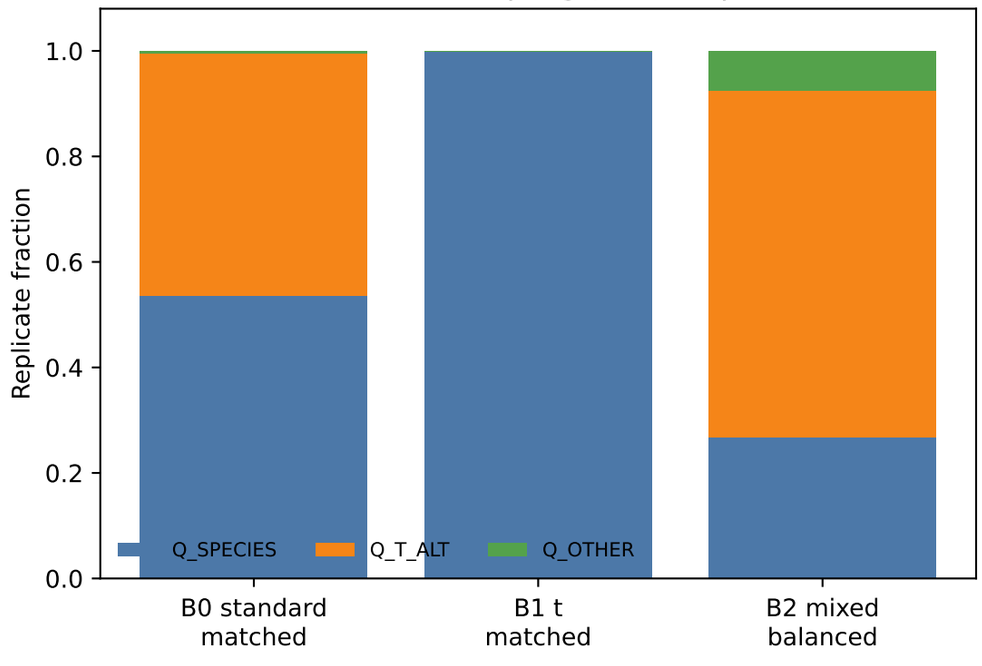


Contribution to Δ = q_species − q_t_alt



negative Δ → Q_T_ALT; positive Δ → Q_SPECIES

D. Balanced resampling (1,000 replicates)



Selected tips per replicate: B0_STANDARD_MATCHED=12, B1_T_MATCHED=12, B2_MIXED_BALANCED=21
